Sunrise Solar Solutions Hits \$7 Billion Watt-hours In Energy Savings for Solar Customers

Briarcliff Manor, N.Y. -- [Sunrise Solar Solutions](#), the premier residential and commercial installer of solar photovoltaic (PV) systems throughout Westchester, Rockland and the Hudson Valley, has just announced a major milestone: reaching the **7-billion-watt-hour (7GWH)** mark in clean energy produced from systems designed and built by Sunrise. This is an increase of 3-billion watt hours in just 10 months since last February. The savings are especially important in a region that's known to pay some of the highest electric rates in the country, rising 4 -5 percent a year for the past decade.

This is only the beginning of the economic benefits of a solar installation, says Sunrise Solar Solutions President Douglas Hertz.

"The combination of better and more attractive solar equipment, rising efficiency, falling costs, and the increasing desirability and value of homes with a PV system, all add up to significant financial advantages for our solar customers," he added. In fact, in a recent study, homes with a PV system sold for a premium of about \$4 more per watt of solar power -- or about \$15,000 for a typical-sized residential system.

Sunrise Solar Solutions, located in Briarcliff Manor, NY, with nearly a decade of experience installing more than 250 successful projects, has won numerous Solarize contracts throughout the Hudson Valley. The company was selected to be the designated solar installer for many Solarize Westchester initiatives: Rye Brook, Hastings, Dobbs Ferry, Cortlandt, Croton and Mamaroneck; Solarize Nyack Plus (including all of Rockland County); and the designated commercial installer for Solarize Wappingers. Some noteworthy projects and achievements include:

- Being awarded the contract for the first country club in Westchester County to go solar
- Designing the solar system for the first LEED Platinum home in Westchester County
- Winning the largest solar contract for a co-op to be installed in Ossining in 2016
